Manufacturing

United Streetcar was formed in December, 2005, and is a wholly owned subsidiary of Oregon Iron Works, Inc. (OIW). OIW is a metals manufacturing company that specializes in mechanical and electrical integration and complex fabrication across diverse industries. United Streetcar is the only manufacturer of modern streetcars in the United States. United Streetcar manufactured the first modern Buy America compliant streetcar in the U.S. for the City of Portland, Oregon.

Company Challenges

United Streetcar's anticipated manufacturing needs required an ERP system back-bone for start-up operations that could be built upon as United Streetcar grows. The implementation plan, scope and approach should seek to establish a basic infrastructure that will enable United Streetcar to establish discrete manufacturing capabilities as quickly as possible and build on these capabilities. United Streetcar was looking for an implementation partner with a local presence.

The Solution & Result

Jibe Consulting utilized Oracle's Accelerators to rapidly create the project's baseline configuration and build the foundation for United Streetcar's Financial, Distribution and Manufacturing operations.

The implementation took 4 months. Best business practices were implemented for Industrial Manufacturing utilizing the following modules:

- General Ledger
- Job Cost
- Accounts Payable
- Accounts Receivable
- Inventory – with serial number tracking
- Procurement – (inventory and non-inventory)
- Bill of Material
- Work Order Management
